These instructions contain standard illustrations, so representations may deviate from the original. The scope of delivery for special designs, options or technical changes may differ from the explanations described here. We reserve the right to make changes for the purposes of technical improvement.

Despite taking great care when creating these assembly and maintenance instructions, printing errors cannot be excluded. We are grateful for any information alerting us to errors or poorly formulated/represented information in this document. All rights reserved. No part of these instructions may be reproduced or may be processed, duplicated or distributed in any form using electronic means without the written consent of LINE TECH AG.

Date of creation: 11/2020 MS/RB

## 1. General

### Warranty:

LINE TECH AG warrants compliance with the specifications expressly agreed upon in the confirmation and in general the execution of the order with the due care customary in the industry. The warranty covers the function of the Bridge Module and includes all defects that are demonstrably due to manufacturing or material defects.

### Warranty period:

The warranty period (factory warranty) is twelve months from the date of delivery according to the general terms and conditions of sale and delivery, provided a longer period has not been agreed upon.

### Warranty exclusion:

Excluded from the warranty are defects and faults for which LINE TECH AG is not responsible, such as natural wear, force majeure, improper handling, interventions on the part of the customer or third parties, excessive and improper use, unsuitable operating equipment, extreme environmental conditions and non-compliance with assembly, operating and maintenance instructions. Any warranty claims shall expire in such cases.

LINE TECH AG is only liable for customer damages that are directly related to the breach of contractual obligations and that have been caused by LINE TECH AG due to gross negligence. The liability for slight negligence on the part of LINE TECH AG or for actions of auxiliary persons commissioned by LINE TECH AG is excluded to the legally permitted extent. In no case is LINE TECH AG liable for direct or indirect consequential damages or third party damages. The exclusion or limitation of liability of LINE TECH AG also apply for the personal liability of its employees, workers, representatives and vicarious agents.

## 2. Use in Accordance with the Regulations

LINE TECH Bridge Modules with ball screw (BSD) are particularly well-suited for applications with larger strokes and high travel speeds due to their structural features. The Bridge Module with ball screw (incomplete machine in the sense of the Machinery Directive 2006/42/EC) is intended to be installed in machines and is used exclusively to move, precisely position and transport lightweight to medium-weight loads. Bridge Modules can also be used cantilevered.

Bridge Modules with ball screw (BSD) can be installed in any position (horizontal, vertical or overhead). All relevant technical safety and accident prevention regulations, including DIN EN ISO 12100 (machine safety), as well as all documentation enclosed with the product, such as instructions, etc., must be observed when installing the incomplete machine in a complete machine.

The Bridge Module with ball screw may only be used in accordance with the intended use provided by LINE TECH AG. Any other use beyond this is considered improper. The manufacturer is not liable for any personal injury and/or property damage that results from said improper use. The risk is borne solely by the user. The assembly and maintenance instructions prescribed by the manufacturer must be observed to ensure use in accordance with the regulations. Only qualified specialist personnel may carry out the commissioning, assembly, maintenance and repair work.

In general, LINE TECH Bridge Modules are intended for linear movement as occurs during positioning, processing, transporting, palletising, loading, unloading, clamping, tensioning, testing, measuring, handling and manipulating workpieces or tools. In the process, the type-specific load data from the respective catalogue documents or supplementary technical calculations from LINE TECH are to be taken into consideration.

## 3. Use Not in Accordance with the Regulations

Use in application areas with special operating conditions, such as in the presence of moisture, dirt, dust (fibre glass and wood), aggressive atmospheres, potentially explosive environments, extreme climatic conditions and/or extreme temperature fluctuations, short-stroke and others are not consider proper and intended use. For special solutions, please contact LINE TECH AG.

## 4. Declaration of incorporation

### Declaration of incorporation

within the meaning of the EC Machinery Directive 2006/42/EC, annex II B

The manufacturer

Line Tech AG  
Europastrasse 19  
8152 Glattbrugg

hereby declares that for the incomplete machine

Designation: Bridge Module with ball screw (BM)  
Material number: according to the nameplate LINE TECH AG

these basic requirements of the Machinery Directive 2006/42/EC have been applied and complied with:

- |  |   |
|--|---|
| - 1.1.2 Principles for the integration of safety | - 1.5.6 Fire  |
| - 1.1.3 Materials and products                   | - 1.5.8 Noise   |
| - 1.1.5 Machine design with respect to handling  | - 1.5.13 Emission of hazardous materials and substances |
| - 1.3.2 Risk of breakage during operation        | - 1.6.1 Maintenance of the incomplete machine           |
| - 1.3.3 Risks from falling or ejected objects    | - 1.7.2 Warning of residual risks                       |
| - 1.3.4 Risks from surfaces, edges and corners   |   |
| - 1.3.7 Risks from moving parts                  |   |
| - 1.3.9 Risk of uncontrolled movements           |   |
| - 1.5.1 Electrical power supply                  |   |
| - 1.5.2 Static electricity                       |   |
| - 1.5.4 Assembly error                           |   |
| - 1.5.5 Extreme temperature                      |   |

Furthermore, it is stated that the specific technical documentation has been prepared according to annex VII part B. These will be transmitted to market surveillance authorities in the form of paper documents/in electronic form upon request.

Compliance with the provisions of additional EU guidelines, standards or specifications:

- |                     |   |
|---------------------|---|
| - EN ISO 12100:2010 | Safety of Machinery - General Principles for Design -<br>Risk assessment and risk reduction |
|---------------------|---|

**The incomplete machine may then first be put into operation once it has been determined that the machine in which the incomplete machine is to be installed meets the provisions of the EC Machinery Directive 2006/42/EC, if relevant under this guideline.**

The following person is authorised to compile the relevant technical documentation:

Notes

5. Safety, References, Symbols

5.1 Safety Instructions

The following safety and hazard instructions are for your personal protection, the protection of third parties and the protection of the Bridge Module. They must therefore be observed.

The following pictograms are used in these assembly and maintenance instructions as safety and hazard instructions:

**DANGER**  
Indicates an imminent danger. Failure to observe this notice may result in death or serious injury.

**WARNING**  
Indicates a potential hazardous situation. If this information is ignored, it could result in property damage or physical injury.

**CAUTION**  
Indicates a possible hazard. Ignoring this information may result in injuries, such as cuts and crushing, etc. Make sure any sources of hazards are secured.

**CAUTION**  
Indicates a possible hazard. Ignoring this information may lead to eye injuries. Wear protective goggles.

**CAUTION**  
Indicates a possible hazard. De-energise the module. Secure the power supply from unintentional or unauthorised commissioning.

**CAUTION**  
Indicates a possible hazard. Ignoring this information may lead to skin burns. Avoid skin contact and wear protective gloves.

**Note**  
Indicates general information and work recommendations.

5.2 Identification of references

References are made to repeated or further information as follows:

 2.1 Reference to section 2.1

 5.1.1 Reference to image 5.1.1 (image 1 in section 5.1)

5.3 Symbols

## 6. Transport

### 6.1 Transport, packaging and storage

The mechanics of Bridge Modules can be damaged from heavy impacts and bending, which can greatly impair its function. Axes with a length of more than 700 mm must always be supported during transport. In order to avoid transport damage, LINE TECH AG Bridge Modules are sufficiently packaged and protected against slipping and vibrations. For storage, the Bridge Module should be placed in a well-padded sturdy crate and sufficiently protected against moisture, dirt and aggressive atmosphere.

### 6.2 Scope of delivery

The scope of delivery of the product includes:

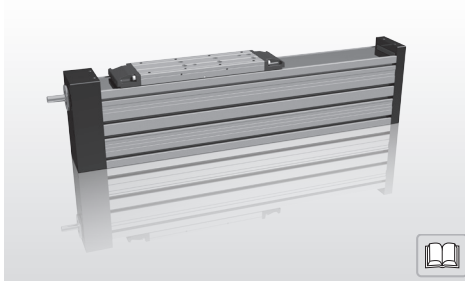

- Bridge Module according to the order confirmation
- Assembly and maintenance instructions
- Additional and special accessories according to the order

## 7. Bridge Module (BM) with ball screw (BSD)

### 7.1 Product overview

BM...R...N

Bridge Module with ball screw

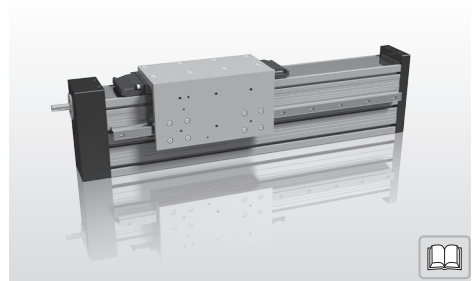

**i** LINE TECH Bridge Modules with ball screw are of precise modular conception, ready-to-install linear slide units with drive. Sealed guide elements in all sizes are employed.

The guides and drive are protected from external factors (such as dirt and chippings) by a steel strip. The base profile as well as the lateral profile are made of aluminium alloy and manufactured with the extrusion process. Additional limit switches fitted on the outside, in conjunction with motors and a controller, ensure correct positioning of the carriage and provide protection against overrun. The selected design provides for a high level of performance with the most compact dimensions.

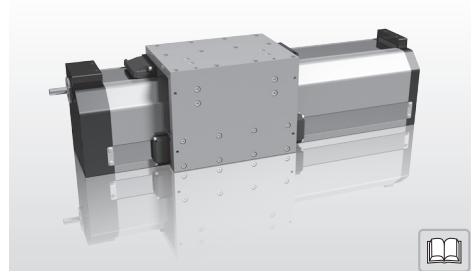

BM...R...L/R

Bridge Module with ball screw and lateral support rail left/right

BM...R...V/W

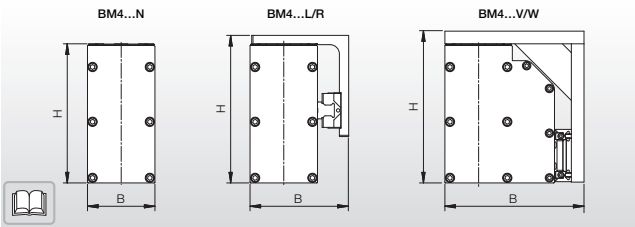

Bridge Module with ball screw and lateral profile left/right

Design

- Compact aluminium base profile
- Ready-to-install Bridge Modules in any lengths
- Carriages made of aluminium

Bridge Module Type	Dimensions W x H [mm]	Load ratings	
		C <sub>0</sub> [kN]	C [kN]
BM4...N	80 x 165	59.9	34.2
BM4...L/R	117 x 174	119.9	68.4
BM4...V/W	165 x 180	119.9	68.4

Bridge Modules can be installed and assembled by qualified personnel using these assembly and maintenance instructions.

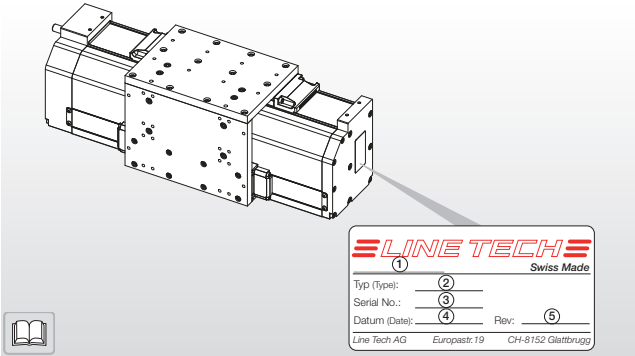

The units must not be opened under any circumstances. If a unit is opened, safe operation can no longer be guaranteed!

7.2 Nameplate “Ordering of spare parts and accessories”

The following information is to be taken from the nameplate in order to get a clear identification of the unit. This information is to be given to the manufacturer immediately if there are problems with the Bridge Module:

1. Name of the unit
2. Type designation
3. Serial number
4. Date of production  
(calendar week/year)
5. Date of repair  
(If available)

7.3 Tightening torques for screws

Screws of the strength class 8.8 are used by default. If other screws are used, these are specially labelled.

The tightening torques recommended by LINE TECH AG are defined in the table below.

Tightening torque $M_{A\ max.}$ [Nm]		Friction factor for screws $\mu = 0.120$								
Screw according to	Material class	Thread size								
		M2	M2.5	M3	M4	M5	M6	M8	M10	M12
ISO 4762	8.8	0.36	0.73	1.27	3.00	5.90	10.10	24.60	48.00	84.00
ISO 4762	12.9	0.60	1.23	2.14	5.10	10.00	17.40	42.20	83.00	144.00
ISO 7380-1	10.9	0.25	0.50	0.90	2.00	4.00	7.20	12.00	23.00	58.00

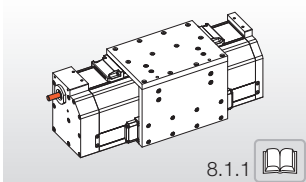

8. Design and assembly of Bridge Modules with ball screw

8.1 Assembly design versions with different motor mountings

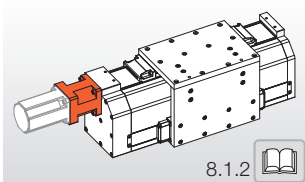

LINE TECH Bridge Modules with ball screw can be delivered in various design versions and with different prepared motor mountings ➡ 13  
Dimensions for Bridge Modules BM4 ➡ 9.1-9.3

## 8.2 Technical data for ball screw (BSD)

BM	BSD	Axial load rating		Positioning accuracy	Repeating accuracy	Acceleration	Axial play		Idle torque
Size	d x p	C <sub>0</sub>	C <sub>dyn</sub>			a <sub>max</sub>	Type	Axial play	
	[mm]	[N]	[N]	[μm/mm]	[mm]	[m/s <sup>2</sup> ]		[mm]	[Nm]
BM4...R...	20 x 20	5705	4912	52/300	< 0.01 <sup>1)</sup>	10.0	A	< 0.20	0.200
							R	< 0.02	
							V	—	0.400

d x p = screw diameter x thread pitch

1) backlash not factored in

A = axial play

R = reduced play

V = with preload

## 8.3 General technical details for Bridge Module

BM	Movement speed		Moments of inertia		Stroke max.	Cover	Feed and friction force	Moved mass
Type	v <sub>max</sub>	v <sub>max</sub>	I <sub>y</sub>	I <sub>z</sub>			F <sub>v</sub>	m <sub>b</sub>
	[m/s]	[m/s]	[cm <sup>4</sup> ]	[cm <sup>4</sup> ]	[mm]		[N]	[kg]
BM4...R...N	5.0	<sup>2)</sup>	708	332	3000	without	25.00	2.500
						with	35.00	
BM4...R...L/R	5.0	<sup>2)</sup>	721	401	3000	without	50.00	4.390
						with	60.00	
BM4...R...V/W	5.0	<sup>2)</sup>	1074	834	3000	without	50.00	6.820
						with	70.00	

<sup>2)</sup> for spindle drive, dependent on rotational speed characteristics, spindle length and corresponding critical rotational speed

## 8.4 Permissible speeds

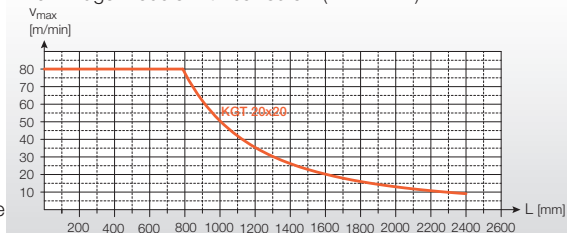

For ball screw drive, note the rotational speed characteristics, spindle length and relevant critical rotational speed as well as engine speed

Legend:

1) Greater accuracy on request  
 L = overall length of the Linear Module  
 F = axial load

... for Bridge Module with ball screw (BM4...R...) <sup>1)</sup>

Tightening torque of  
screws ➔ 7.3

## 10. Deflection of Bridge Modules (BM)

### 10.1 Permissible deflection

Bridge Modules may be assembled self-supporting. However, the deflection must be noted in the process, as this limits the possible load.

The Bridge Module must be additionally supported if the maximum permissible deflection is exceeded.

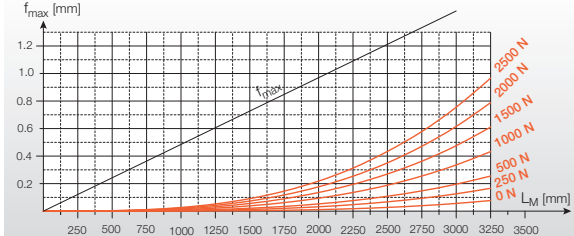

The maximum permissible deflection is limited by the maximum deflection angle of 5'. If this value is exceeded without support, it will affect the service life.

If there are increased requirements for the system accuracy, we recommend supporting the Bridge Modules along the entire length.

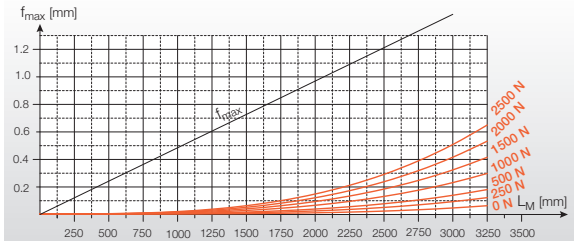

The following diagrams apply for:

- fixed clamping (40–50 mm per side)
- 3–4 screws per side
- fixed substructure

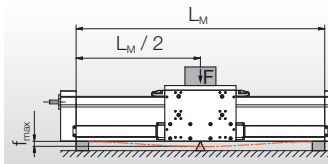

BM4...N o. BM4...L/R... with ball screw

BM4...V/W... with ball screw

Mounting position: horizontal

11. Fastening accessories

11.1 Securing the Bridge Module with clamps

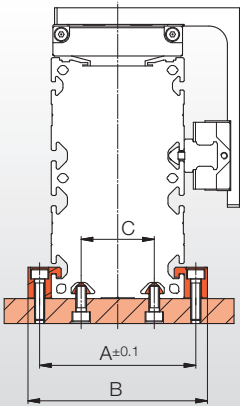

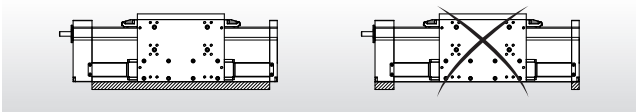

Caution:

The end plates may not be used as supporting elements. Only attach and support Bridge Modules on the base profile, not on the end plates.

The aluminium base profile is the main supporting body of the unit. This must be supported across the entire length if possible.

Mounting options  
The Bridge Modules are secured with clamps or sliding blocks.

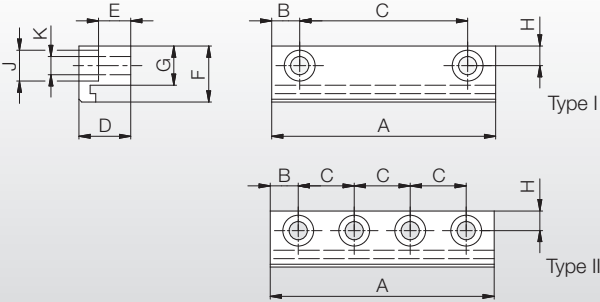

Nominal size	Dimensions [mm]		
	A	B	C
BM4...	94	108	44

Recommended number of clamps:  
- 4 per metre and side (type II)

The screws are to be secured with Loctite. For the recommended tightening torques  $M_{A_1}$ , see ➔ 7.3

Nominal size	Dimensions [mm]											Weight [kg]	Item no.
	Type	A	B	C	D	E	F	G	H	J	K		
BM4...	I	...	...	...	...	...	...	...	...	...	...	...	.....
	II	80	10	20	17.8	10.8	20	14	7	ø11	ø6.5	0.148	M-40357/1

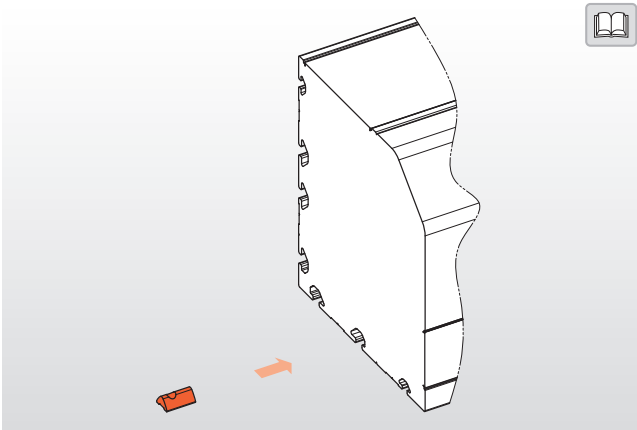

11.2 Securing the Bridge Module with sliding blocks

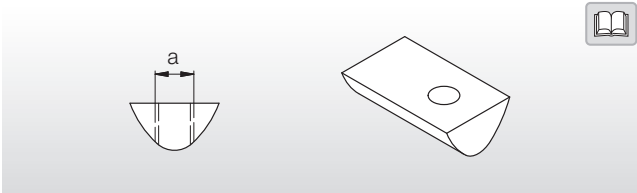

Caution:

Sliding blocks having the relevant groove width can be used to mount add-on parts to the base profile.

Sliding block types NS5 and NS6 can be used in line with the groove width. Sliding blocks are available from LINE TECH AG. Size, material and connection thread as per the following order system (e.g. NS6 St M5) must be defined as the order number.

The available types are listed opposite.

Dimensions [mm]		Material
Groove width	a (thread)	
5	M3 / M4 / M5	Steel / stainless steel
6	M4 / M5 / M6	Steel / stainless steel

Order designation for sliding blocks

Example: NS6 St M5

NS

6

St

M5

Sliding block NS

Groove width

5

6

Thread size (Mass “a”)

M3 / M4 / M5 / M6

Material

St = steel

stainless = stainless

## 12. Limit switch

### 12.1 Attachment / assembly / plug connection

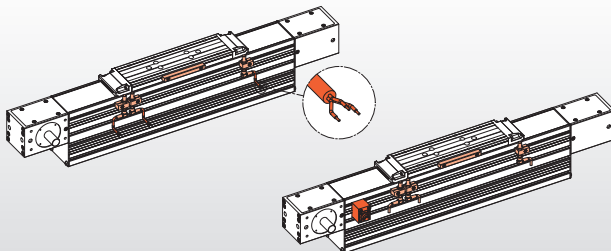

#### Limit switch preparation

Limit switches are supplied as standard without connector box with 2 metre long cables (order code N); a connector box with completed cabling is available as an option (order code S).

Limit switch mating connectors and cables are not included in the delivery, but can be ordered ready-made from LINE TECH AG.

Standard: without connector box (N), with connector cable (L = 2m)

Optional: with connector box (S)

### 12.2 Limit switches / reference switch mounting overview

#### Limit switch

The limit switches are used in conjunction with a control unit to limit the stroke (prevent overrunning of the carriage) and to define the reference position.

At the factory the plus and minus limit switches are preset to a nominal stroke of 0 to +5 mm

LINE TECH employs the following standard inductive limit switches:

- PNP normally closed

Supply: 10...30 V DC

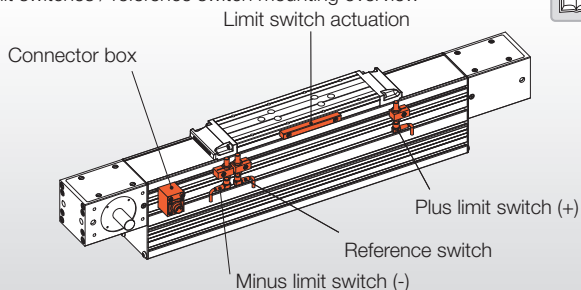

Current consumption off-load:  
< 10 mA

Load mx. 200 mA

On request the following non standard limit switches are available:

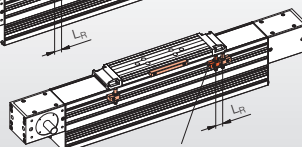

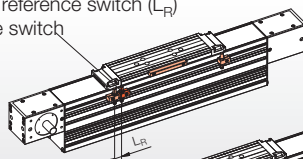

- PNP normally open (PNP-NO)
- NPN normally closed (NPN-NC)
- NPN normally open (NPN-NO)
- Reed switches
- Mechanical switches

#### Limit switches / reference switch mounting overview

#### Position of the reference switch ( $L_R$ )

Front reference switch  
(motor side)

$L_R = 20 \text{ mm}$

Rear reference switch (opposite motor side)

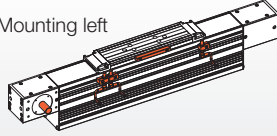

## Fitting position of limit switches

The installation position of the limit switches. is evident from the following images. The reference point can be assigned to the positive (+) or the negative limit switch (-).

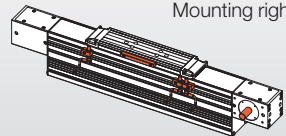

Special applications often require a separate reference point switch to be mounted between the positive and negative limit switches. The limit switch closest to the motor mounting (limit switch controller interface) is known as the forward limit switch.

## Limit switch mounting

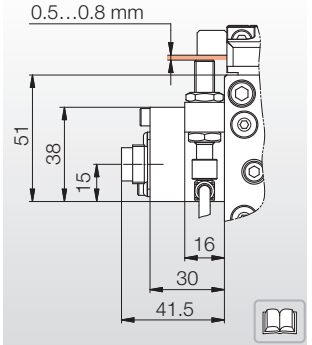

Mounting left

Mounting right

## Dimensions / switch gap

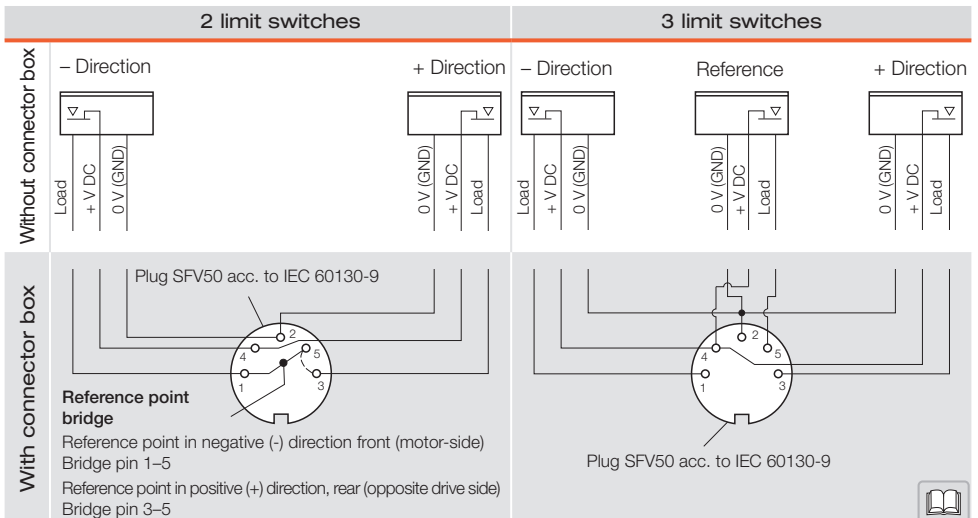

The plug pin assignment when using a connector box is shown in the diagram below.

The individual pins are assigned as follows:

- Pin 1 = negative (-) direction (load)
- Pin 2 = 0 V (GND)
- Pin 3 = Positive (+) direction (load)
- Pin 4 = +10...30 V DC
- Pin 5 = Reference (load)

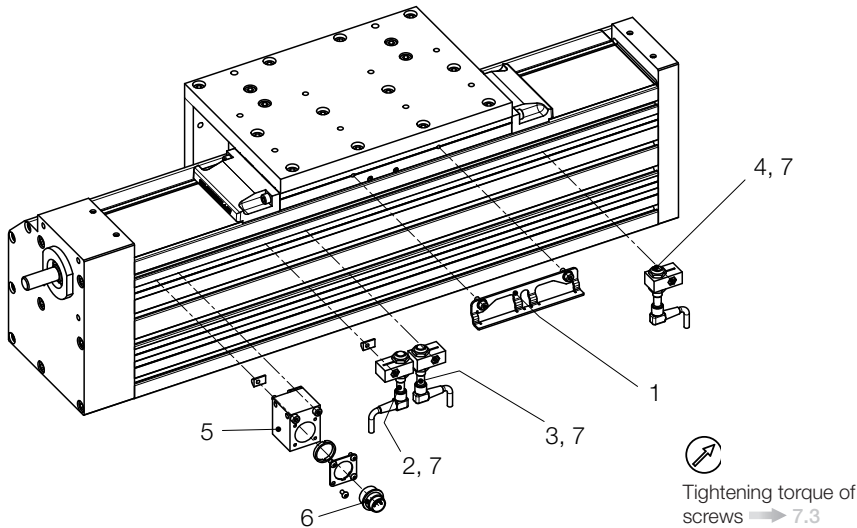

Colour code key for the diagrams below:

- Load = black
- +V DC = brown
- 0 V (GND) = blue

12.2.1 Limit switch mounting (exploded view)

12.2.2 Parts list for exploded view → 12.2.1

Ordering spare parts and accessories requires the information from the nameplate → 7.2

Position	Designation	Position	Designation
1	Limit switch actuation	5	Connector box
2	Minus limit switch (-)	6	Plug (including nut)
3	Reference switch	7	Limit switch cable (3-pole)
4	Plus limit switch (+)	8	-

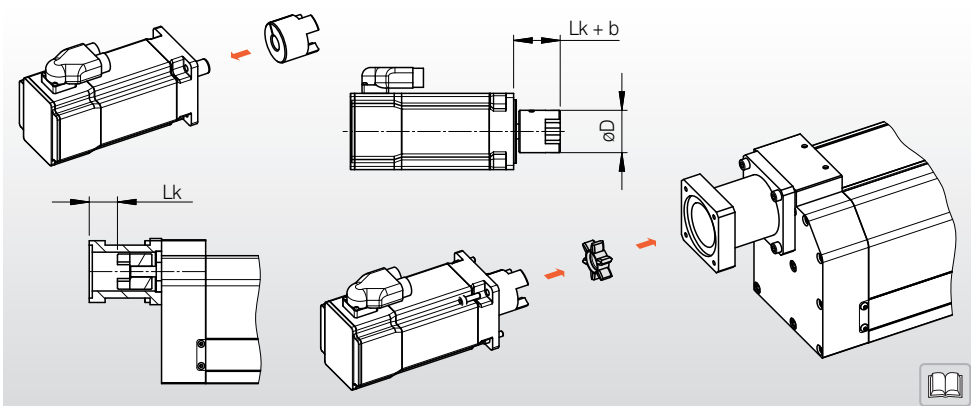

13. Motor mounting

13.1 Straight, with ball screw

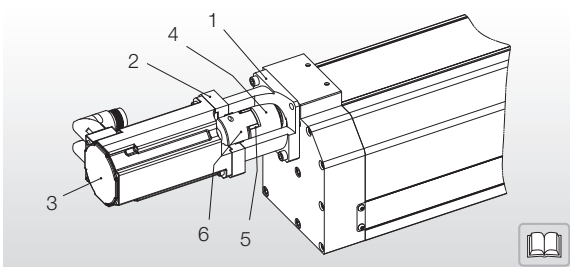

Note the motor manufacturer’s operating instructions prior to mounting a motor

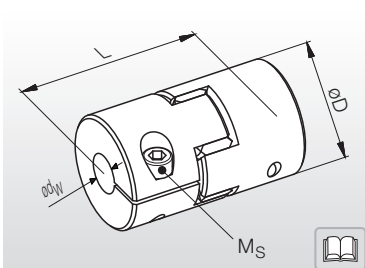

- 1) Measure the spacing of the Lk on the unit
- 2) Attach the clamping hub to the motor mounting in the spacing Lk + b. Tightening torque of the clamping screw → 13.1.2
- 3) Attach the preassembled motor with gear ring to the unit

13.1.1 Motor attachments and parts list, straight with ball screw

Position	Designation
1	Intermediate flange
2	Motor plate
3	Motor
4	“BM” clamping hub
5	Sprocket
6	“Motor” clamping hub

13.1.2 Tightening torque of the clamping screws

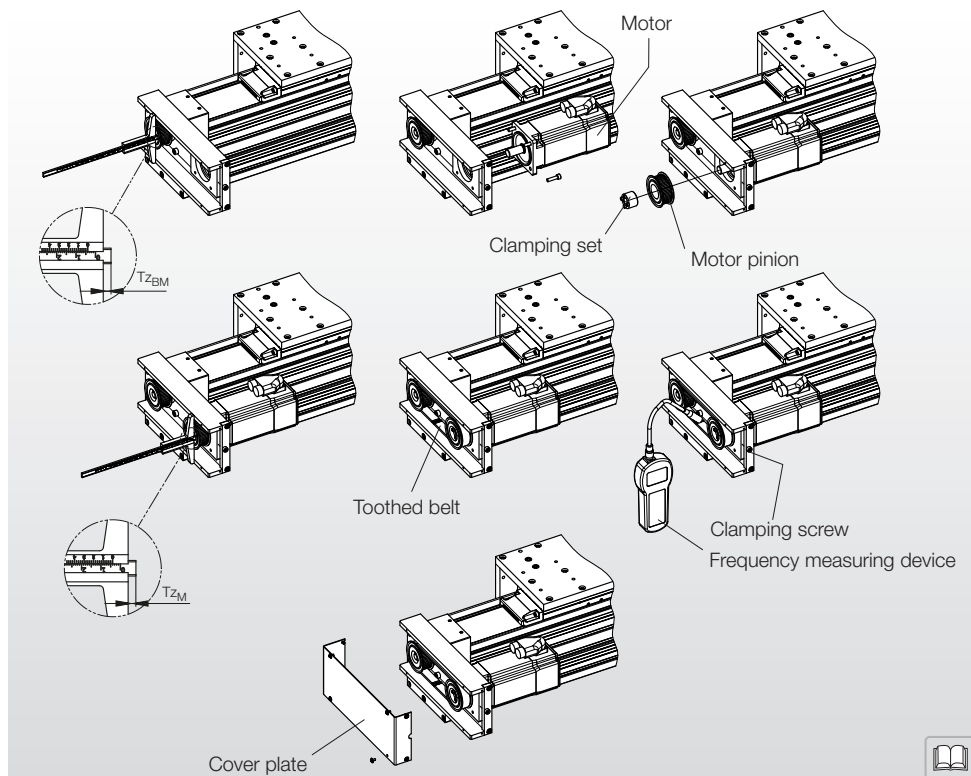

Tightening torque of the clamping screws								
Size	Dimensions				Tightening torque of the clamping screw		Drive torque	
	L	øD	b	ød	Type	M <sub>S</sub>	T <sub>N</sub>	T <sub>max</sub>
19	66	40	12	≤20	ISO 4762	10.10	17.0	34
19	66	40	12	≤20	ISO 7380	7.20	17.0	34

## 13.2 Lateral, with ball screw

Note the motor manufacturer's operating instructions prior to mounting a motor

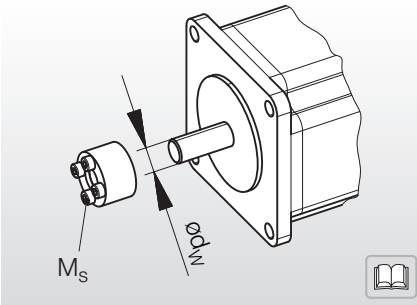

- 1) Measure the mounting depth of the mounted pinion  $T_{z_{BM}}$  at the unit.
- 2) Mount the motor on the belt drive housing with the corresponding screws.  
Ensure that the screws are tightened so that the motor and the motor plate can still be moved easily.
- 3) Mount the pinion on the motor side using a clamping set (tightening torques of the clamping screws  $\Rightarrow$  13.2.1) in the same mounting depth ( $T_{z_{BM}} = T_{zM}$ ).
- 4) Insert the toothed belt and tighten using the clamping screw.  
The toothed belt tension is checked using a frequency measuring device. The adjustment frequency "f" can be determined according to the calculation  $\Rightarrow$  13.3.  
Please also note the operating instructions of the frequency measuring device used.
- 5) Tighten the screws of the motor mounting according to the tightening torques  $\Rightarrow$  7.3 .
- 6) Mount the cover plate.

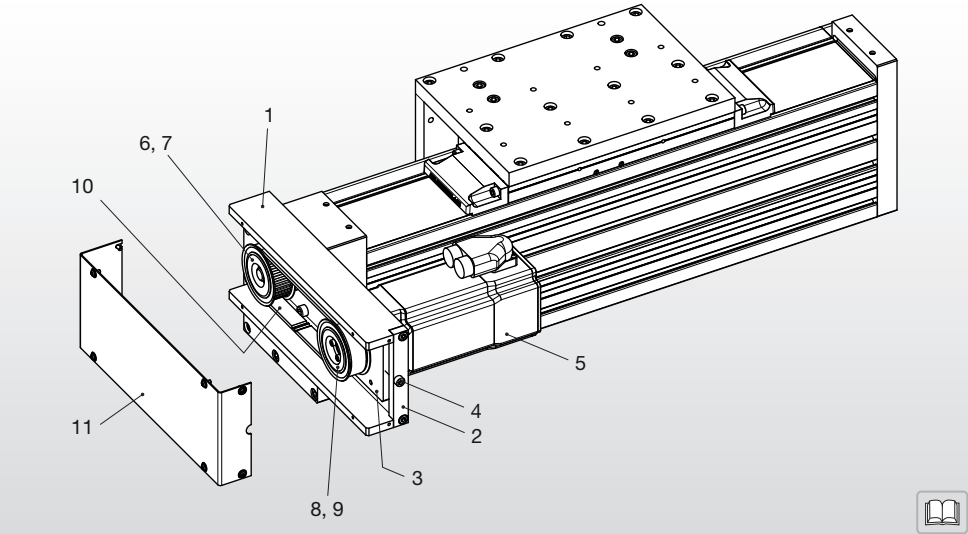

13.2.1 Tightening torque of the clamping screws

Tightening torque of the clamping screws		
Motor shaft $\varnothing d_w$ [mm]	Type ISO 4762	Tightening torque $M_s$ [Nm]
$\varnothing 5 \dots \varnothing 12$	M2.5 x 10	1.20
$\varnothing 14, \varnothing 15$	M3 x 16	2.10
$\varnothing 16 \dots \varnothing 19$	M4 x 20	4.90
$\varnothing 20, \varnothing 22$	M5 x 20	10.00
$\varnothing 24 \dots \varnothing 32$	M6 x 24	17.00

13.2.2 Motor attachments and parts list, lateral with ball screw

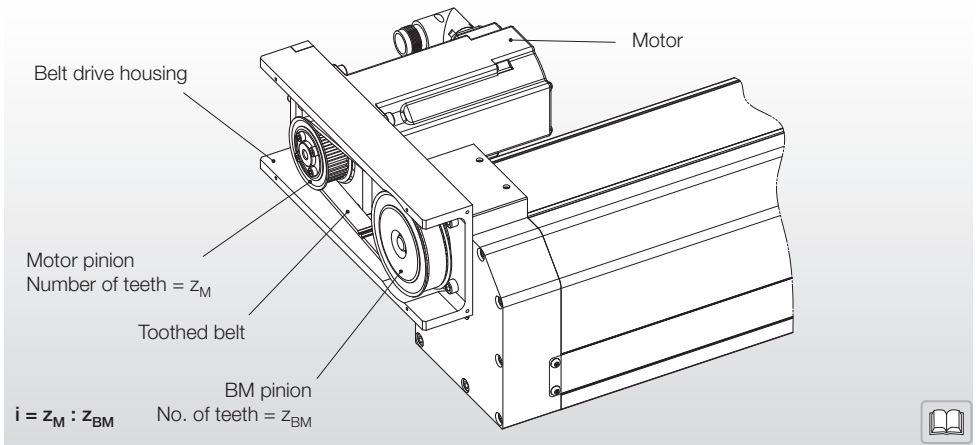

Position	Designation	Position	Designation
1	Belt drive housing	7	Bridge Module clamping set
2	Belt clamping plate	8	Motor pinion
3	Motor plate	9	Motor clamping set
4	Clamping screw	10	Toothed belt
5	Motor	11	Cover plate
6	Bridge Module pinion		

## 13.3 Calculation of the preload frequency

$\beta$	=	Wrap angle [°]	$M_M$	=	Motor torque [Nm]
$b$	=	Belt width [mm]	$m_{spec}$	=	Specific toothed belt weight [kg/m]
$E$	=	Axle base [mm]	$n_M$	=	Engine speed [rpm]
$E_{eff}$	=	Effective axle base [mm]	$P$	=	Power in [kW]
$f$	=	Preload frequency of the belt [Hz]	$t$	=	Division [mm]
$F_U$	=	Circumferential force [N]	$v_M$	=	Speed of the motor pinion [m/s]
$F_{Uzul}$	=	Permissible preload force [N]	$z_M$	=	Number of teeth of the motor [-]
$F_V$	=	Preload force [N]	$z_{BM}$	=	Number of teeth of the Bridge Module [-]
$L_F$	=	Free span length [m]			
$L_R$	=	Belt length [mm]			

Nominal size	Reduction $i$	Axle base $E$ [mm]	No. of teeth		Belt data				Max. permissible preload force $F_{Vzul}$ [N]
			$z_M$	$z_{BM}$	Length $L_R$ [mm]	Width $b$ [mm]	Division $t$ [mm]	Spec. Weight $m_{spec}$ [kg/m]	
BM4...	1:1	132.5	32	32	425	15.0	5.0	0.065	330
	1:1.5	135.0	32	48	475	15.0	5.0	0.065	330
	1:2	133.5	24	48	450	15.0	5.0	0.065	330

- 1) Wrap angle  $\beta$

$$\beta = 2 \cdot \arccos \cdot \left[ \frac{t \cdot (z_{BM} - z_M)}{2 \cdot \pi \cdot E} \right] [^\circ]$$

- 2) Effective axle base  $E_{eff}$

$$E_{eff} = \frac{1}{4} \cdot \left[ L_R - \frac{t}{2} \cdot (z_{BM} + z_M) + \sqrt{\left[ L_R - \frac{t}{2} \cdot (z_{BM} + z_M) \right]^2 - 2 \cdot \left[ \frac{t}{\pi} \cdot (z_{BM} - z_M) \right]^2} \right] \text{ [mm]}$$

- 3) Power P

$$P = \frac{M_M \cdot n_M}{9.55 \cdot 10^3} \text{ kW}$$

- 4) Speed of the motor pinion  $v_M$

$$v_M = \frac{n_M \cdot z_M \cdot t}{60 \cdot 10^3} \text{ [m/s]}$$

- 5) Circumferential force  $F_U$

$$F_U = \frac{P \cdot 10^3}{v_M} \text{ [N]}$$

- 6) Review  $F_U$

$$F_U \leq F_{Uzul}$$

- 7) Preload force  $F_V$

$$F_V = F_U \cdot \sin \frac{\beta}{2} \cdot 0.61 \text{ [N]}$$

- 8) Free span length  $L_F$

$$L_F = \sqrt{E_{eff}^2 - \frac{(z_{BM} - z_M)^2}{4}} / 1000 \text{ [m]}$$

- 9) Preload frequency of the belt f

$$f = \sqrt{\frac{F_U}{4 \cdot m \cdot L_F^2}} \text{ [Hz]} - 0\% / + 10\%$$

Notes

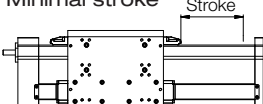

14. Commissioning

14.1 Operating conditions

Contact LINE TECH AG prior to commissioning for application areas with special operating conditions, such as in the presence of moisture, dirt, dust (fibre glass and wood), aggressive atmospheres, extreme climatic conditions and/or extreme temperature fluctuations, short-stroke and others.

Before commissioning the unit, check that the mounting means of the installed axis match the manufacturer's specifications with respect to the mass and acceleration and that they are secured.

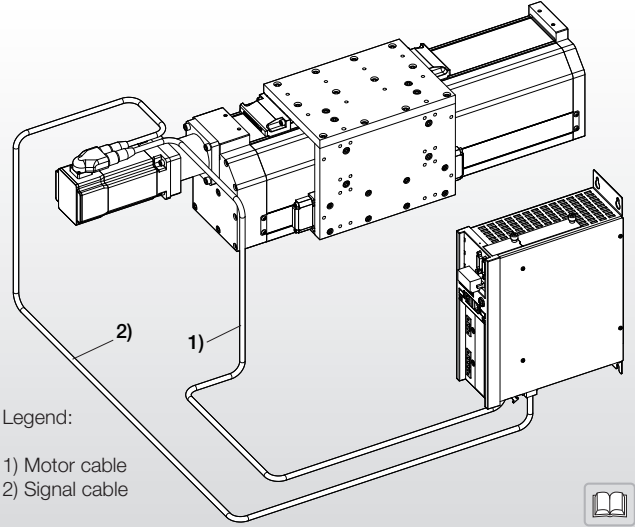

Normal operating conditions		
Ambient temperature	5°C... 80°C	 °C
Movement speed	≤ m/s	
Rotational speed of the ball screw		
Load		
Minimal stroke		Type
	BM4	Minimal stroke
	..	≥ 55 mm
	..	..
	..	..

14.2 Electrically connect the BM

Observe the safety regulations when working on electrical systems! The AC/DC supply must be connected by a qualified electrician.

Install the power cables and signal cables so that they are spatially separated! Do not install the product near devices that generate strong electromagnetic fields. This could impair the function. Observe the documentation of the controller used.

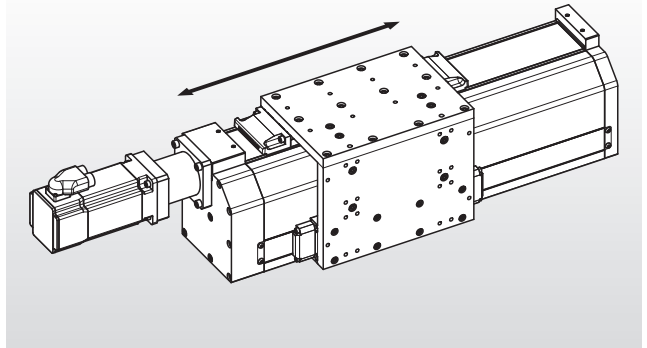

Check the EMERGENCY OFF switch prior to the first test run!  
Note the technical data about the Bridge Modules with ball screw  
➡ 8.2 - 8.4

Carry out a trial run only in the installed state combined with linear guides.

Check the internal protective equipment.

Check all screw connections to ensure they are tight.

Carry out the entire stroke at a low speed.  
Check the setting and function of the limit switch ➡ 12.2

## 15. Operation

The Bridge Module with ball screw may only be used in accordance with the intended use provided by LINE TECH AG  
➡ 2

The Bridge Module with ball screw may only be operated under operating conditions that are approved by the manufacturer ➡ 14.1

The Bridge Module must be checked for externally visible damage and defects. Externally attached mounting means, electrical cables and plug connections must be visually checked to ensure they are in a flawless condition.

If changes occur that put the safety of people and systems at risk, the Bridge Module is to be taken out of operation immediately.

## 16. Decommissioning

Disconnect the machine/system from the mains supply. To secure the machine from being switched on again without authorisation, actuate the emergency stop and attach the warning sign "Machine/system disconnected from mains supply".

Remove the drive from the unit.

Unscrew the Bridge Module from the machine/system.

17. Maintenance - Service - Upkeep

17.1 Lubricant Quantities, Lubrication Points, Lubrication Interval

The Bridge Modules may only be lubricated with grease.

The initial greasing is performed by LINE TECH AG. The bearings used are usually maintenance-free and do not have to be re-lubricated under normal conditions.

The Bridge Modules may only be lubricated with grease. LINE TECH AG recommends MICROLUBE GBU-Y 131 as a standard grease. If using other greases (other brands), the compatibility with the standard grease must be checked first. Observe the safety data sheet.

In the event of special operating conditions, inquire about the lubricant quantities. Values and information about lubricant quantities can be found in the adjacent table, corresponding to use under normal operating conditions.

There are grease nipples on both sides of the carriage parts. It is sufficient if the amount of grease is pressed in from one side only.

Type	BSD	Grease	Grease relubrication		
	d x P (mm)		Ball screw (cm³)	Runner blocks (cm³) Grease point <sup>1)</sup> Grease point <sup>2)</sup>	
BM...R...N and BM...R...L/R					
BM4	20 x 20	Klüber Microlube GBU-Y 131	2.30	3.50	1.75 (per carriage)
BM...R...V/W				Grease point <sup>1)</sup>	Grease point <sup>4)</sup>
BM4	20 x 20	Klüber Microlube GBU-Y 131	2.30	3.50	3.50

Depending on which value is reached first, the linear guides and the ball screw are to be relubricated according to the adjacent table.

Type	BSD d x P (mm)	Operating interval (h)	Time interval (months)	Running interval (km)
BM4	20 x 20	500	3 - 6	1 000

Various grease nipples exist on the Bridge Modules.

- 1) Lubricating nipple to DIN 3405-D
- 2) Lubricating nipple to DIN 71412
- 3) Lubrication either from the left or right. Greasing positions are not dependent on stroke.
- 4) Lubricating nipple to DIN 3405-D

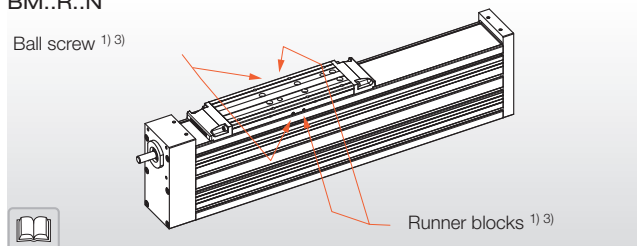

For pressing in the lubricant, we recommend the grease gun with the item number: ZPE.GREASEGUN-03

Procedure:

- Lubricate the table part(s)
- Calculate the amount of grease per stroke when lubricating with a hand press
- After the lubrication, remove the excess grease with a clean cloth.

Linear movements are the backbone of modern, industrial production systems. LINE TECH AG has been involved in linear technology solutions for more than 20 years. A comprehensive range of components as well as linear and positioning systems, combined with the specialist expertise of our employees, is the stand-out benefit of LINE TECH AG.

Matured services, from engineering to design, in conjunction with flexible production, complement the product offering, thereby offering customers a high level of benefit.

## In-house products

In-house products from LINE TECH are modular, ready-to-install linear axes:

- Linear Modules
- Bridge Modules
- Compact Units
- Positioning Units

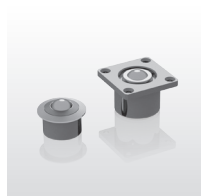

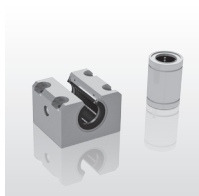

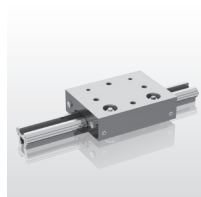

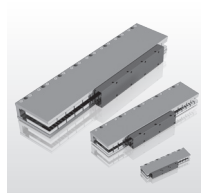

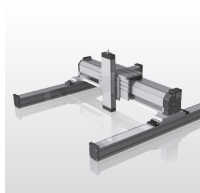

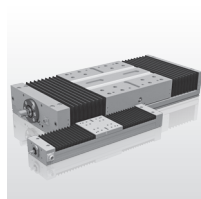

## Systems / Assemblies

Our engineering team develops tailor-made solutions in accordance with customer requirements.

## Components

Trade products complement the product offering with linear guides, drives and components:

- Linear guides
- Ball screws
- Roller linear guides
- Ball bushings and shafts
- Ball casters
- Extensive range of accessories
- Megatorque motors
- Linear motors
